

VINCENT LOBELLO

San Antonio, Texas | (732) 644-0392 | vlobello15@gmail.com

PROFESSIONAL SUMMARY

Software Development Engineer known for translating complex enterprise systems into clear, accessible explanations for technical and non-technical audiences alike. Demonstrates new functionality directly to cross-functional teams, partners with UX Designers and Product Managers on requirements and acceptance criteria, and owns delivery across three enterprise platforms spanning modern front-end (React, TypeScript, Micro Frontends) and back-end (C#/.NET, REST APIs, SQL) architecture. Combines strong technical fluency with clear communication across the full development lifecycle, from sprint refinement to production incident reviews.

Core Competencies: *Technical Demos | Requirements Gathering & Translation | Cross-Functional Partnership (Product, UX, Engineering) | Enterprise System Ownership (Operations, Auth, Workforce)*

EXPERIENCE

United Parcel Service (UPS)

Parsippany, New Jersey

Software Development Engineer II

September 2025 – Present

Software Development Engineer I

April 2025 – August 2025

ICOMS: Enterprise Operations Platform Modernization

- Own front-end delivery on a company-wide initiative modernizing a monolithic enterprise operations platform into a Micro Frontend (MFE) architecture (React, TypeScript), translating Figma prototypes and story requirements into production-ready applications, then presenting completed work in end-of-sprint demos to PMs, cross-functional teams, and leadership
- Shape story scope and acceptance criteria directly with the PM and cross-functional partners in sprint refinement, and lead the handoff of legacy pages across 5+ engineering teams as part of the MFE migration

SAS: Authorization & Provisioning Services

- Design backend authorization and provisioning services (C#/.NET), defining and validating REST API contracts with Swagger/OpenAPI and Postman on every story to keep downstream and cross-functional teams aligned
- Write YAML/JSON configuration for cluster and API URL transformation logic on a .NET/YARP gateway running in Kubernetes, and drive root-cause investigations on production incidents, presenting findings and fixes directly to stakeholders

DGS: Workforce Management Modernization

- Gather requirements straight from business stakeholders and translate operational needs (timecards, approvals, workforce tracking) into clear technical specifications and shipped features
- Build backend services (C#/.NET, SQL) managing timecard and driver data, including exports consumed by other teams, partnering across teams from testing through rollout

Application Developer

December 2023 – April 2025

- Built the front end (CSHTML, JavaScript, CSS, C#) of the End of Day Support Page, a dashboard used to finalize End-of-Day procedures for UPS delivery drivers via REST APIs and background services, including manual JSON event entry for DIAD upload malfunctions

I.T. Developer

June 2023 – December 2023

- Built a full-stack Alert Monitoring Dashboard (C#, WinForms, SQL Server) for the I.T. support team, gathering user feedback throughout an Agile development cycle to shape the final product
- Developed a full-stack Message Retrieval System (Angular, TypeScript, C#, SQL Server) replacing an outdated dispatcher/driver message process, with API-driven retrieval and Excel export

PROJECTS

RoomiePal (Dart, Flutter, Firebase)

- Built a mobile app increasing household productivity, enabling roommates to join a household, assign chores, claim appliances, and share a calendar; implemented Firebase storage and CRUD operations across a six-person Agile team

LEADERSHIP

Aggie Club of Engineers

College Station, Texas

Webmaster

May 2022 – May 2024

- Led a team of software developers building a web application for the organization (HTML/CSS, GitHub), mentoring junior developers; organized weekly gatherings and monthly events supporting philanthropy, fundraising, and recruitment

EDUCATION

Texas A&M University

College Station, Texas

Bachelor of Science in Computer Science, Minor in Cybersecurity

GPA: 3.73/4.00 | May 2024

TECHNICAL SKILLS

Languages & Frameworks: C#/.NET, C++, JavaScript, TypeScript, React, Angular, HTML, CSS

Data & Databases: SQL, MSSQL, Stored Procedures, Data Management

Architecture & Tools: REST APIs, Swagger/OpenAPI, Postman, YARP, Kubernetes, MFE, Git, Agile, Figma, Power BI, NIST
